ARE WE READY FOR THEM?

We have heard a great deal lately about the immigration policy of the present government at Ottawa, and although there is yet no sign of its being put into action, still it might be a good idea to get our house in order, before inviting any one to come and live with us.

There is no doubt that if we should get any immigration as a result of the proposed policy, a large percentage of it will come to Western Canada, and there is no place where preparation for their coming is more necessary than in this same western Canada.

We are told from all quarters that what Canada needs most is settlers on our unoccupied land, and that special attention will be given to this class of immigrants under the new policy. So far so good. But are the conditions under which we are laboring at the present time in the prairie provinces such as will make these new comers happy and contented, and place them in a position to make good. Are the systems in the several departments of provincial and dominion activities such as to guarantee to these newcomers a fair return for their labors and at the same time permit them to enjoy the advantages enjoyed in other countries which are now making a strong appeal for similar classes of immigrants? If not, then we are replacing the horse before the cart, as one hundred satisfied prosperous newcomers will be a greater benefit to the country than a thousand who come and find us not prepared to receive them.

Since our immigration will consist largely of farmers, and since most of them will likely be located in Saskatchewan and Alberta, some matters which will concern them most will be educational facilities, community life, roads, transportation and marketing facilities and suitable freight rates. Are these all that could be desired in a country which is depending largely on increased population and the settlement of our vacant lands, for the solution of its many problems? If not, then the sooner we get them in shape the better for the country as a whole.

In this connection one outstanding condition in the prairie provinces which is badly in need of consideration and adjustment is that of freight rates. In the last fourteen years Saskatchewan and Alberta have increased their wheat production 700 per cent. and 1000 per cent. respectively. Yet the farmers in these two provinces have a higher transportation bill and receive a lower price per bushel than in any other part of Canada. It is in these provinces that there is the largest proportion of virgin arable land, and consequently, it is in these portions of the Dominion that new settlers will be most likely to come. For this reason it is essential that conditions be improved, and one way to do so is by the immediate and speedy development of the westbound route which would place settlers in those areas in the same relative position as those of Manitoba in relation to the world's market. Is there any reason why farmers in scattered points in Alberta should be forced to haul their grain clear across the continent when the port of Vancouver is right at their front door? Then as to rates. Besides the development of this route there is also the question of rates. At present

ent the rate from Calgary to Vancouver, a distance of 640 miles is 15c per bushel, while the rate from Calgary to St. John, a distance of 2,750 miles, is only 36c per bushel, over four and a quarter times the distance and only two and a half times the rate.

British Columbia, through its premier, is putting up a strong fight for the equalization of the freight rates, and should receive the support of the prairie provinces in this respect.

NEW ZEALAND'S EDUCATIONAL SYSTEM.

At a meeting of leading educationalists of Ontario, held in Toronto last week, R. McKenzie, an inspector of schools from New Zealand, was present and addressed the gathering on the educational system now in force in his country.

His remarks were listened to with keen interest by those present, as he showed that the New Zealand system is very different from ours.

Mr. McKenzie pointed out that in New Zealand all teachers' salaries are paid by the Government. The salaries are graded according to the academic standing, efficiency and experience of the teachers. He emphatically stated that this system had proven itself most satisfactory. It would certainly prevent any friction being caused by salary disputes between school board and teachers.

Teachers in New Zealand are promoted strictly on the basis of their academic standing and efficiency. The best teacher always secured the best position, Patronage or "pull" are entirely eliminated.

Boards of education in New Zealand are relieved of difficulties in securing a suitable staff, and also in amicably arranging salaries. All these matters are arranged by the Government and Department of Education.

Seven out of nine of the members of every Board of Education are elected by the parents of the children in attendance at the schools. No one other than the parents has a vote.

Education—even in the University—is free to all those who prove that they have the brains to profit by it. Thus, the best fitted are given their opportunity.

A system of vocational training is being worked out whereby the student is given the course for which he shows himself to be best fitted.

At the conclusion of Mr. McKenzie's address several Ontario speakers stated the New Zealand system was far in advance of theirs and expressed the hope that Ontario would soon adopt many, if not all, of its features.

There is no doubt that there are many features in the New Zealand system which would be well worth emulating not only in Ontario but in all the Canadian provinces.

Now that the fine weather appears to be here to stay and motoring is once more in full swing, it would be well if all drivers of cars would get the habit of practicing "safety first." With the ever increasing number of cars now traversing our main thoroughfares the need for this is more imperative than ever. A little precaution and not so much speed may save drivers from placing themselves in awkward positions, and answering to serious charges. Speed artists should learn their lessons from the experiences of others as reported almost daily in the papers.

No power on earth can keep a first class man down or a fourth class man up.

The world needs less population and more men.

One of the best things a father can present to his son as a commencement present is a job.

Two States Concerned

About Tabert's Death

We reprint the following from The

"When the horrible affair of young Martin Tabert, who was whipped to death by a whirling dervish, was known, the people of two states were shocked beyond expression. The dead man was North Dakota. The other was fair Florida. Dakotas were shocked because Tabert was a Dakota. Florida was shocked to learn such barbarity, under the guise of law, was possible within her limits. The North Dakota legislature investigated it. Assistant Attorney General Grinn of North Dakota, came to Tallahassee to press the matter. He has returned home satisfied. Before leaving Tallahassee he addressed a letter to the joint legislative committee, thanking them for their promptness and thoroughness. We take pleasure in reporting the result of the case."

"There are some bright spots," says Mr. Grinn "in this unfortunate affair that we will take delight in reporting to the North Dakota legislature and the whole-heartedness with which both houses of the North Dakota legislature met the request of the North Dakota legislature for an investigation. The legislature has given the committee a fairly good report. The committee is efficient, fearless and thorough action of your committee in this case. A family concern was not seeking to excuse it, and in recommending legislation to remedy the conditions as well as recommending the punishment of those found guilty of wrong-doing."

"Another is that the people of Florida did not know that such was the abuses practiced under their laws, and when this investigation of such abuses were brought to their attention, they demanded more strongly than the people of any other state, and in unmistakable language through the public press and otherwise, their abolition of conditions under which such abuses were possible."

"The case is the case that Florida and North Dakota, as great commonwealths, instead of becoming a laughing stock on account of the case, have been able to act together in fraternal cord and draw closer together as sister states. We hope that the people of Florida and North Dakota are bound closer by this action and may last forever."

A sister of young Tabert's lives in Greenock, Alberta, which makes the circumstances more interesting to citizens of this province.

London Is Again

Financial Centre

"Within four years London has regained the old supremacy and is the financial centre of the world. This statement is made clear by Frank A. Vandepol, a prominent United States financier, in a recent issue in the New York Times."

"London is again the centre for world financial business has superseded the dollar in writing letters of credit. Foreign borrowers find more favorable terms in London than in New York. The stability of London, demanded by London through all the period since the war has been in marked favorable contrast with the wide fluctuations of money rates in New York. In the face of England's seriously injured international trade balance, the pound sterling has been brought back almost to its gold parity. London again speaks financially with a voice of world authority."

The world financial centre is in the first instance the world clearing house. Measured by the volume of such world clearing house transactions, London has fully regained ascendancy over New York.

U. S. Capital is

Coming to Canada

American industrial interests are increasing their holdings in Canada. Armour's have bought a substantial interest in Gun's Limited, one of Toronto's outstanding packing concerns. The Tobacco Products Company of New York, has secured a large interest in the Tucker Tobacco Company, which has also taken in an important competitor. Agents understood to be acting for the Great Canadian Company recently paid \$2,000,000 for the Canadian Cigarette Company, which has interests near Princeton, N.C., which includes one of the most important copper deposits on this continent.

Co-operative Selling

Of Cattle is Success

More than ten million pounds of cattle, live weight, have been sold by the farmers of Western Canada under the pooling plan since co-operative selling was first put into effect at the St. Boniface market on February fifteenth. Good markets have been found, especially in Ontario, where during March and April large numbers of feeder cattle were shipped.

SUGAR FACTORY FOR SOUTHERN ALBERTA

It is reported that efforts are being made to interest American capital in a sugar factory to be established in Southern Alberta, probably at Raymond. A sugar company at Salt Lake City is said to be behind the project, and will build a factory if results of tests with beets this year are unsatisfactory.

Advocate in The Review.

MOUNTAINS AND VALLEYS

ALONG SKEENA RIVER

MOST WONDERFUL

The changing panoramas of mountains and valleys along the Skeena and Bulkley Rivers of Central British Columbia, holds the traveler's constant attention as areas of supreme scenic grandeur unfold themselves as the train skirts valleys and rivers, or winds around mountains, bringing to view quaint Indian villages, with Teton poles of the tribes, or here and there salmon canneries or mining towns. Interest alternates rapidly along this portion of the Canadian National Railway. Bulkley Gate and Bulkley Canyon are features of great interest, whilst the Bulkley Valley is characterized by its wealth of agricultural land comprising the fertile valley of Central British Columbia.

Western Canada Butter

Popular in England

A despatch from London, England, states that the present season has witnessed an unusually heavy importation of Canadian butter. The products of the province of Manitoba, Saskatchewan, and Alberta, exported to the United Kingdom for the first time, made a very favorable impression and usually brought higher prices than that from the United States. This is attributable to the better system of grading and to the purity of the butter, and to the methods of co-operative marketing.

According to international figures Canada took second place in the United States among all the farming nations of the world in the volume of her oat crop in 1922. The Dominion production was 491,220,000 bushels from 14,841,000 acres, as against the Republic's 1,215,486,000 bushels from 40,000,000 acres. It will be noted that Canada's average yield per acre was over 33 bushels, while that of the United States was less than 30 bushels.

Second Fortnightly Crop Report

(Issued by the Department of Agriculture, Edmonton, May 25th, 1923.)
Wheat seeding in the province is finished and in many sections the crop is up and looking healthy and vigorous. The total wheat acreage will be somewhat under that of last year, but on the whole it is considered that the seeding was done in better shape and on better prepared land. Oats, barley and fodder crop seeding is now progressing. In portions of central Alberta, where the early rainfall has been light, some of the oat seeding was held back awaiting rains. The indications are that considerable oats will be sown this year to be cut for a fodder crop.

Most sections of the southern part of the province report good rainfall, and that the grain incoming along in fine shape. In parts of central and northern Alberta there have been good showers, while in other sections more rainfall is needed. On the 22nd, a fine rain fell in the east central part of Alberta extending from Saskatchewan as far west as Ryley. At Irma there was seven hours' rain, and at Vermilion one-fifth of an inch fell. The Grande Prairie district had a good rain on Tuesday, with lighter rain at Peace River and at Berwyn and in other sections of the north. Today rain is falling at Edmonton and the showers are reported as far south as Red Deer. Last week frost was reported from some sections, but only in one or two spots was any damage to young crops reported.

From nearly all parts of southern Alberta a large increase in the acreage sown to fodder crops is reported. Considerable new alfalfa acreage has been sown, also a large acreage of corn and sudangrass, indicating that farmers are giving more attention to fodder crops and to dairying. Sweet clover wintered well in Central Alberta. Fall rye in some sections is over a foot high. In places the fall rye winter killed where water laid on the crop or where it was not covered by snow.

With anything like the normal supply of rainfall during the growing season, the early crop indications would appear to be very fair, the acreage somewhat less than last year, and the seeding period in most parts very favorable for doing good spring work. Pasture in the central and northern parts of Alberta is short, and will be benefited by good rainfalls. Last year's supplies of fodder have been pretty well exhausted.

Grasshoppers—Any danger of a real menace from the grasshopper has not yet developed. The whole country was well organized last year, and the work done is showing good effects this season. The Department of Agriculture has the organization already in the field and is well prepared to meet any trouble which may arise. So far the reports have not been serious.

Liquor on British Ships Is Medicine

Great Britain's position on the ship liquor question as communicated to the state department at Washington by the British embassy, is understood to be based on a contention that United States port authorities have no jurisdiction in international law over water as a part of the regular supplies of foreign vessels. The authority of United States officials extends only to portions of the cargo of foreign ships, which are intended for importation into the United States and no way permits of interference with either the physical mechanism, rations or stores of such vessels when they put into United States ports. While this principle apparently conflicts with that recently laid down by the United States supreme court, indications are increasing that the treasury department has found a way to reconcile the two by permitting ships under foreign registry to list the wine rations of their crews as a part of the medical stores allowed under the law.

Three carloads of steers were shipped recently on direct killing to the real for delivery to the British market. These animals had been at the recent fat stock show in Regina, and keen competition in bidding was staged before the cattle were finally sold for the British market.

For new shingles—**Stephens' Shingle STAIN**
For old shingles—**Stephens' Shingle PAINT**

On new shingles you want **Shingle Stain**.

But when shingles get weathered, they thicken up, become brown and absorbent-like blotting paper. That's when you want **Shingle Paint**—a new Stephens' product, remarkably successful, and exclusive to Stephens' manufacture.

Shingle Paint gives strong, brilliant, permanent color effects. It is particularly useful on new and old roofs alike, where color clashing is common.

An old black roof can be made Red, Green, or any color with **Shingle Paint**. This cannot be accomplished with a stain.

Stephens' Dealers See the nearest and get the best price.

Weekly News Bulletin

Issued by Publicity Commission, Government Buildings, Edmonton

Closed for Season.

The Provincial Government and cleaning and grading plant at Edmonton has been closed for the season, and no more cleaning will be done until the half section from the new crop comes in the fall.

Co-operative Hay Shipping.

The Co-operative Livestock Shipping Association at Coramotion reports successful shipments of hogs and cattle to the Calgary stockyards. On a \$250 market for hogs, selling expenses, freight, commissions, insurance, etc. amounted about 10 per cent per 100 pounds, leaving the producer \$200 per 100 lbs. off the rate at Calgary. The shrinkage between Coramotion and Calgary was 3-4 pounds per hog. The farmers producing the hogs considered the co-operative shipping very satisfactory.

New Act Takes Effect.

Alberta's new debt adjustment act will become effective on June 1st, 1923. The act, introduced by J. P. Fenn of the public utilities board, who is commissioner for the Brought Relief Act in southern Alberta, has been appointed director for the new act.

The Provisions of The Children of Unmarried Parents Act comes into effect on June 1st.

The Silt Machine Tax Act becomes operative on June 1st. This Act imposes a license fee of \$50.00 per year for these machines. A test case in connection with this Act will be taken to the courts.

Montana Has Her Troubles.

The Scientific Farmer, published at Missoula, Montana, reflects the result of the past couple of years' drought conditions in Montana when it asks: "What is the matter with Montana?" During the past two years one hundred banks have failed, twenty-five per cent. of the farms have been abandoned, and fifty thousand people have left the State.

Western Cattle Are Healthy.

Alberta purchased cattle which are entered in the accredited herd tests for the year ending March 31, 1922. The cattle were purchased from the record of reactors, being second to British Columbia, which has the cleanest with a percentage of 4.94 per cent. reactors, while Alberta had 6.03 per cent. The report of the veterinary director general which has just arrived shows that there were in all 22,043 head of cattle tested in Canada, of which there were 8,760 in Alberta, a percentage of 14.79. Compensation paid being \$103,161.

Part of Bedgewick Farm Sold.

The Provincial Government has recently disposed of a portion of the Demonstration Farm at Bedgewick, which was established there several years ago. The half-section sold comprised the main part of the farm, on which the farm buildings were located. The purchase price was a half section to the south of the portion sold, and under the agreement the

Government retains one dwelling and two barns, which will be moved to the part of the farm. It is planned to dispose of the remainder of the farm as soon as possible. In the meantime the half section still held by the Department of Agriculture will be rented for the present year.

Trans-Canada Highway.

On Tuesday morning the plans for the Trans-Canada Highway were laid before the Minister of Public Works by Dr. Douglas, President of the Canadian Automobile Association. So far the highway runs from Halifax to Regina, where it forks, one branch going west by way of Moose Jaw, Medicine Hat, Calgary and Banff to Vancouver, and the other going west by Saskatoon, Regina, Edmonton and Jasper Park to Vancouver. This will put a new line highway through each of Alberta's great National Parks. Mr. Ross, Minister of Public Works, approved of the plans, and said he intended to make a personal inspection of the Jasper Highway route. He left this week on this trip of inspection.

Highway Engineers Meet.

H. P. Keith, District Road Inspector for Alberta; Mr. Harlow, State Highway Engineer, Montana, and a Dominion Government engineer, held a conference at Cardston this week to discuss the "park to park" highway proposition.

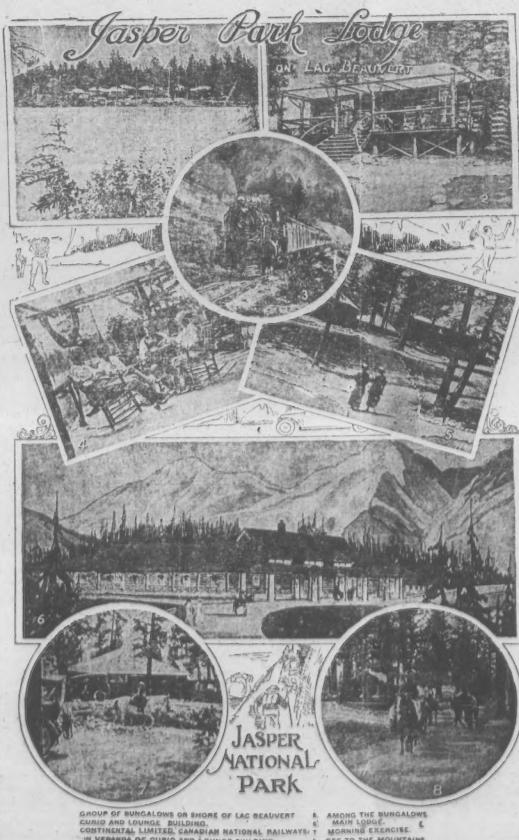

Tendered Banquet.

On Wednesday night members of the medical profession and citizens of Edmonton tendered a banquet to Prof. J. H. Collip, of the University of Alberta, in recognition of his part in the discovery of "insulin" used in the treatment of diabetes.

Grasshopper Campaign.

Officials of the Department of Agriculture have completed a survey of the province and have the grasshopper control campaign well organized and functioning. The central agency is the Grasshopper Control Commission, which is equipped with supplies for poison good enough to take up the work. The provincial organization covering the various portions of the country is complete, a number of officials who were on the work last year being employed. Last year's work has given them valuable experience, and last year's equipment and training is also available for any work which may be required this year. The same thing is true of the organized municipalities—they are well equipped to take up the work where necessary. It is anticipated that the good results of last season's energetic campaign will minimize the need for any work which may be required this year.

Striking Development Of The Dairying Industry In The Western Provinces

The most striking development of agriculture in the Canadian Prairie Provinces in recent years has not been the most apparent to the outside world, has undoubtedly been in dairying. Progressive dairymen in the industry have been most encouraging, and have extended territory, which but a few years ago was devoted to stock raising exclusively to the support of cattle ranches and expensive wheat fields, and in a period as recent as immediately prior to the war was under the necessity of importing the butter it consumed, has now a large exportable surplus which has already won for itself a favorable reputation in many markets.

Having regard to the dairying industry and the national benefits of more intensive methods of farming, the last eight years have virtually brought miracles of change in the western provinces. Creameries have come to dot the countryside so profusely that one is to find a creamery conveniently situated to almost every farming community. The car or rig with its cream can indicator is a common feature of the rural roads which was exceptional in the past. Stock herds of dairy bred dairy cattle have come to supplant the cowboys and range prevalent before and break the monotony of what was previously an interminable monotony of ploughing and grain fields. Most keenly of all has the western farmer come to feel the change in a greater sense of insurance and security which accrues from a steady income.

That the prairie provinces have only made a commencement on their rise to a pre-eminent place in the Canadian dairy industry is evident from the fact that in the year 1922 the creamery increased its output of dairy butter by 25 per cent. over 1921. Manitoba showed an increase in dairy production, while Alberta also achieved an increase of nearly 20 per cent. The total value of Alberta's dairy production in 1922 was \$22,250,000, of Saskatchewan \$18,800,316, and of Manitoba \$12,412,223, and for the three provinces of \$54,189,439.

No less remarkable than the growth of production in this dairy industry is the diligent progress made in creating a product of undoubted excellence. Western Canadian butter is not only of a high rank in Canada, but is able to make satisfactory competition in the United States and Europe.

Last year, for instance, Alberta butter was shown at eleven exhibitions, coming into competition with butter from all other countries. In 1922, and out of a total of possible 239 awards, the province secured 211. Including 14 foreign dairymen, Alberta was the premier province in the previous year, securing the first five prizes in Canada for the highest average scores, while in the United States, Manitoba secured the silver medal in Chicago and the year before took three Canadian province championships and twenty first prizes.

Among other factors which have contributed to the success of the Western Canadian dairy production have been the unflinching efforts made to improve dairy herds, and the constant keeping in sight of a high ideal in this regard. This has resulted in the development of exceptional herds of such excellence that though western dairy history is so young and the time of evolution brief, western dairy cattle are already in demand in many countries. Recently a new world's record in butter production was made at the farm of the Dominion Government at Agassiz, British Columbia, where a cow was responsible for a yield of 1,673 pounds of butter in 245 days. There are large herds on the prairies whose average production is over nine thousand pounds of milk a year. On the Alberta farm of the Canadian Pacific Railway a record of 21,600 pounds of milk was recently made and the entire herd there is averaging close to 24 pounds per day during the winter months.

When an exportable surplus was attained at the high quality of the product naturally facilitated the development of markets, and today the prairie provinces were importing butter, not only for their urban but their rural populations, are, exporting the same product in large quantities. Saskatchewan butter is only 50 per cent. reworked in the province, the remainder coming in Vancouver and eastern markets. In 1922 the experiment of shipping direct to Great Britain was made and so successful were the results of the first shipment that before the end of the year some dairy cars had been dispatched and a permanent trade in this commodity is in sight for the province. Manitoba, which, in 1914, imported 100 carloads of butter, now exports about 100 carloads a year, and has successfully established its position on the British market.

W. N. D., 1471

ket. The butter product of Alberta is going in considerable quantity to the Pacific coast, to British Columbia, the Yukon and as far east as Montreal.

Predicts Prosperity For Canada

American Statistician Believes Canada Can Expect Big Trade Revival

In a recent review of conditions in Canada, published in the United States press, Roger W. Babson, the well-known statistician states that while conditions in the United States may be better on the whole at present than in Canada, he predicts that "unless we take care business will be better in Canada in 1924 than it will be here (United States). Conflicting he writes, "The farming condition is better. The former did well last year and the fruit growing sections have very profitable yields. A more hopeful feeling is widespread here, and in the prairie and other agricultural regions. Better prices for farm products are helping the Canadians as well as the farmers in the States. But the Canadian farmer was slower in feeling the good effect of this increase in the prices of his products, so he will enjoy it longer."

Airplanes Take Mail From Ocean Liners

Scheme Inaugurated By Plymouth to Speed Up Service

The Plymouth Chamber of Commerce inaugurated a time-saving experiment in picking up urgent mail from the liner in the States in Plymouth Sound. Dummy mail was dropped overboard at six o'clock in the morning on the liner in the States in Plymouth Sound. Dummy mail was dropped overboard at six o'clock in the morning on the liner in the States in Plymouth Sound. Dummy mail was dropped overboard at six o'clock in the morning on the liner in the States in Plymouth Sound.

The use of this scheme, it is contended, would enable the delivery of letters to business houses in time for the replies to call the return air mail. The scheme is being tried at Southampton for the mail boat that evening. The air mailer is expected to reach there about five o'clock in the afternoon.

London Church Unlucky

Hard to Beat Record of St. George's The Martyr

Which is the unluckiest church in London? It is interesting to know if the record of St. George's the Martyr, in Queen Square, W., could be broken, comments the Westminster Gazette.

An appeal has been made to Tor H. to give help in instructing the members of his own society, because the vicar has lost his son-in-law. The vicar has been absent through illness for some months past.

Boys playing football have broken the church windows, and there are not sufficient funds for repairs, and the gates have been wrenched open. The collection has been stolen.

The steps of the church are regularly used by youths for card games. The congregation has fallen away. Early morning Holy Communion has been maintained, but there was only one church member present recently. It is doubtful if any of the doomed city churches can equal this story of misfortune. Yet the vicar is a man who has worked hard in the parish and years to make a success of his church.

New Kind of Punishment

J. M. McCarthy, a contractor, was "sentenced" in an Arkansas court to eat out of the M. B. Devine book, "Black Beauty," after he was convicted on a charge of cruelty to animals. The judge gave him three months to read the book, and announced that at the expiration of the time an oral examination on the book would be held.

While Fishing On B.C. Coast

It is understood that while fishing at Queen Charlotte Islands will be carried on full strength this summer. Last year the M. B. Devine book, "Black Beauty," after he was convicted on a charge of cruelty to animals. The judge gave him three months to read the book, and announced that at the expiration of the time an oral examination on the book would be held.

Mrs. Mary K. Edwards, an Ohio woman, who was the first midwifery sent out by the Congressional Woman men of America, is still living in South Africa, at the age of 90 years and with a mind still alert and active.

Lawyer (to applicant for position), "Yes, I need an office boy. Are you qualified?"

Boy—Yes, sir; but I'm a little truthful enough to hurt your feelings.

Biggest Employer In World

British Postmaster-General Declares to Give a Better Service

Sir William Jenson-Hicks, Postmaster-General, speaking at a luncheon given the Canada Street Hotel by the City of London Tradesmen's Club, said that there was no single business in the world which employed so many men as the Postmaster-General of Great Britain, he reports the London Morning Post.

Last year they carried 5,000,000 letters, 500,000,000 postcards, well over 1,000,000,000 printed papers, nearly 300,000 newspapers and well over 200,000 parcels. Altogether the post office handled 5,500,000,000 separate parcels.

Then there has been 700,000,000 telephone calls, added the Postmaster-General—700,000,000 calls of conversation, over 700,000,000 opportunities of irritability. Speaking as a man who used the telephone a good deal, he thought he could say it was not so bad as it used to be.

Among the trials of a Postmaster-General he mentioned the fact that he was asked to find out how many men he was killing him if he could trace a piece of waste paper, and he said he did not like to do it. "I made inquiry in my department," said Sir William, "they replied: 'We have had 100 pieces of waste paper, but we do not know whether we can supply the particular piece the gentleman has lost.'"

The Postmaster-General said that it was his ambition to restore the post office to its former position and to obtain a return of pre-war rates, but he also desired to give better and faster service. "If I could restore the penny postage to five pence, he added, there would be nothing left for my million next year."

The Shortest Name

Single Letter "O" Is Name of Village in Normandy

A resident of Brockton, Mass., is endeavoring to make it believed to be the shortest name in the United States—Edna Bk. Miss Bk, who is of Swedish origin, claims descent from a well-known 18th century explorer, John Bk. At least one French surname consists of a single letter—"O," which is also the name of a village near Argentan, in Normandy. Some years ago a bearer of this surname, when called up for military service declared that he was unable to read or write, so he was instructed to place a cross on the official papers in the name where his signature should have appeared. "Why a cross?" asked a newspaper writer, commenting on this incident. "It is not O as you write as X."

Was Great Electrician

The tragic death of W. H. Wood, one of the greatest practical electricians of England. Arrivals from all parts of the world visit the farm to see his electrical apparatus, for making hay and his many other devices for saving labor. He was a bachelor and a brother of James Archibald Wood, J.P., a well-known Scottish colony magnate, who recently made a gift of £10,000 to endow a chair of mining at the Edinburgh University.

Low Infant Mortality

A feature of the opening session of the annual convention of the Saskatchewan Council of Women, held in Regina recently, was the report of the Public Health Committee, which brought out the fact that Saskatchewan was second to British Columbia for its low infant mortality rate. In 1922 the daily average of births was sixty-one and for every 1,000 born 165 died under one year of age. In 1922 the Saskatchewan Government paid \$6,275 in maternity grants.

Canadian Wheat Trade

The trade of operation of the Canadian Wheat Board Act of 1922, has been extended by Order-in-Council until August 1, 1924. The board act expires on August 1 of this year. The act provides for the appointment of a wheat board on the request of two or more producers.

Every dollar spent in your home town is a boost for the community.

Plans Being Developed For Utilization of Flax Straw Grown By Prairie Farmers

Suicide in the U.S.

Statistics Gathered by the Save-a-Life League

The President of the Save-a-Life League gives us the following peculiar statistics: Six thousand persons committed suicide in the United States during 1922, of whom one-third were women. The grand total included 28 college students, 50 college professors and school teachers, 19 numbers of religious professions, 52 judges and lawyers, 51 physicians, 109 heads of large business concerns, and a number of bank presidents. The oldest suicide was aged 100, and the youngest aged five.

The motive in some cases appeared to be the wilful or self-inflicted man killed himself because he had to give up playing golf; a young woman "just to get a new thrill."

Child suicide, in particular, has alarmingly increased. In 1919, 47 children committed suicide. In 1922 the number was upward of 100. Most pathetic of all is the statistic that more than 1,000 co-eds have committed suicide since the war.—The Independent.

Sir Clifford holds that the millions of logs taken from Canadian forests this spring represent an threat on capital and that the money spent in planting trees should not be regarded as an investment upon which interest can be calculated but as a definite replacement expenditure.

The Rifton plan is to insist on the replanting of two trees for every one cut down and the cost of replanting should be taken out of forest revenue and regarded as a permanent charge upon that revenue.

For many years the problem of how to utilize the enormous waste of straw from the western flax seed oil crop has been the subject of investigation and study. Every year, for many years past, over a million tons of this straw, which the seed has been recovered by threshing, have been wasted by burning, so as to leave the land clean for future agricultural operations.

Realizing the potential value of this enormous tonnage of waste material, the Canadian Pacific Railway made a close study and careful investigation of its utilization; as it presented itself, under conditions which existed, the problem was a difficult one.

The straw was known to have a certain value for its fibre, being similar in this respect to flax, and for its use, the straw cultivated for the production of flax straw. But after having the straw broken up into the fibre value of this flax straw was destroyed, even the production of commercial fibre, owing to the manner in which the straw is broken up in the threshing operation. In consequence of this high grade of paper waste was being thrown away as the waste of the straw was as a pulp material for the manufacture of paper. The investigations conducted in this connection were entirely successful, and the resulting product was an exceptionally high grade of paper waste, but the cost of production of the pulp was too high for practical operation.

The investigations conducted in this connection were entirely successful, and the resulting product was an exceptionally high grade of paper waste, but the cost of production of the pulp was too high for practical operation.

And many a man goes up in the air when he knows an airplane from a go-cart.

Placing Mink at Caribou

For mink and mink, modern machinery promises to revive much activity in old Caribou diggings, according to reports received here. Both diggers and mink will be carried on by British and American syndicates, after prospecting claims which they have secured. Individual prospectors will also work over the fields in search of unworked deposits.
